

Wind-Do

FAQ

1. Can you summarize your idea in 100 words?

Change energy mix to reduce GGE cannot be achieved with small things, its need disruptive solutions.

Wind-Do proposes wind electricity at an average cost of 2 c/KWh, significantly cheaper than any other sources.

- *Tree size turbines with on the shelf parts that will reduce installation cost per megawatt by half.*
- *Easy maintenance that extend lifetime of wind farms to 50 years or more.*
- *Network of various sizes of wind turbines that optimize each site base on its wind profile.*

Two markets:

- *Farmers and small communities that supply electricity to the grid.*
- *Corporations that produce their own energy.*
