

Wind-Do

FAQ

5. Have you filed for a patent? If so, where?

Yet we have three patents pending in USA, a complete presentation is available

US 61/871,830 patent application 'Modular wind turbine 2' describe how a wind turbine can be design / optimized to be more efficient with certain wind profile or for specific purposes.

US 61/760,692 patent application 'Modular wind turbine' describe how several different wind turbines design for specific purpose can be used together to optimize de design of a wind farm in regard of the wind profile of each site. The patent show how a wind farm can be optimized to produce the maximum output (MWh per year), or to enhance the availability of energy beside authorize power (% of delivery), or to counterbalance / optimize the availability of electricity from existing wind farm.

US 61/819,784 patent application 'Continuous and modulated stimulation of wind turbine' describe the advantage of separate the motor and generator function for small and medium wind turbine. Its also detail how continuous stimulation can be optimize to achieve the maximum energy output.
